Not illustrated. 1885 Excerpt: . . . theorem gives on transformation the theorem that the radical axes divide the angle between the parallel circles so that the ratio of the sines of the parts is equal to the ratio of the sines of the angles which the tangents to the circles make with the parallel great circles. This theorem evidently cannot have any analogue in plane geometry, as must in general be the case with the polars of such theorems as refer to the centre of a circle, since the line in a plane corresponding to a parallel great circle is altogether at an infinite distance. Fifth Meeting, March 13th 1885. George Thom, Esq. , M. A. , Vice-President, in the Chair. Gilberts Method of Treating Tangents to Confocal Oonicoids. By George A. Gibson, M. A. The method of treating tangents to confocal conicoids, of which I propose to give an account, is discussed in the number for December 1867 of the Nouvelhs Annales de Mathematiques. The writer of the paper referred to is M. Ph. Gilbert, Professor at the University of Louvain. The results arrived at are in nearly every case already well known, but the method of reaching them is somewhat novel, and I have thought that it might interest the members of this society if I were to give a statement of the chief methods and results of Gilberts paper. In one or two cases I have altered the proofs, and I have added two or three propositions that seemed...
