Springer. Paperback. Book Condition: New. Paperback. 348 pages. Dimensions: 9.4in. x 6.3in. x 0.8in. Controlled stochastic processes with discrete time form a very interesting and meaningful field of research which attracts widespread attention. At the same time these processes are used for solving of many applied problems in the queueing theory, in mathematical economics, in the theory of controlled technical systems, etc. . In this connection, methods of the theory of controlled processes constitute the every day instrument of many specialists working in the areas mentioned. The present book is devoted to the rather new area, that is, to the optimal control theory with functional constraints. This theory is close to the theory of multicriteria optimization. The compromise between the mathematical rigor and the big number of meaningful examples makes the book attractive for professional mathematicians and for specialists who apply mathematical methods in different specific problems. Besides, the book contains setting of many new interesting problems for further investigation. The book can form the basis of special courses in the theory of controlled stochastic processes for students and post-graduates specializing in the applied mathematics and in the control theory of complex systems. The grounding of graduating students...
